

Create HTTP requests to communicate with the mobile app

Assignment date	16 November 2022
Team Id	PNT2022TMID36807
Project Name	Real-Time River Water Quality Monitoring and Control System
Maximum marks	4 marks

- Ensuring that the browser communicates with the required server directly.
- Ensuring that only the communicating systems have access to the messages they exchange.

- HTTP transfers data in a hypertext format between the browser and the web server, whereas HTTPS transfers data in an encrypted format.

- As a result, HTTPS protects websites from having their information broadcast in a way that anyone eavesdropping on the network can easily see.
- During the transit between the browser and the web server, HTTPS protects the data from being accessed and altered by hackers.
- Even if the transmission is intercepted, hackers will be unable to use it because the message is encrypted.
- **Private Key:** It is used for the decryption of the data that has been encrypted by the public key. It resides on the server side and is controlled by the owner of the website. It is private in nature.
- **Public Key:** It is public in nature and is accessible to all the users who communicate with the server. The private key is used for the decryption of the data that has been encrypted by the public key.

Working of HTTP
